Type: ROUTINE INSPECTION
Date: 24-OCT-2017

3.30

WATERING.

There were accumulations of debris and wet shavings by the automatic water valves and PVC drainage pipes under the valves. These accumulations by the water valves and PVC drainage pipes exposes the guinea pig to potential infections with bacteria, fungi, and parasites. Inadequate cleaning and sanitation of the water valves and drainage pipes can result in contamination of the colony. Correct by keeping the water valves, drainage pipes, and surrounding areas sanitized when dirty to ensure the health of the guinea pigs and that such areas be sanitized at least once every two weeks. Correct by October 26, 2017.

This inspection and exit interview were conducted with the owner.
