Animals for Education

Type: RE-LICENSE INSPECTION
Date: 30-MAY-2024

2.40(a)(2) Critical

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

Approximately 3 weeks ago, after finding a Canada goose dead floating in the pool of its enclosure, the facility failed to notify the Attending Veterinarian (AV). Failure to ensure the AV has the appropriate authority for adequate veterinary care may put the other animals at risk of a contagious disease or negatively impact their health and well-being. Exhibiting facilities must assure that the attending veterinarian has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

2.40(b)(2) Repeat

Attending veterinarian and adequate veterinary care (dealers and exhibitors).

In the Infirmary, a medication cabinet labelled for exhibit animals contained medications that were not adequately labeled and/or were out of date. There was an unlabeled squeeze bottle containing a blue liquid, a container labeled Quickstop with no instructions or manufacturing information on it, and a bag of syringes labeled dexamethasone that expired 01/01/2019. Medical supplies that are not properly labeled and/or not properly stored, could deteriorate, become contaminated, or be misused, possibly resulting in harm to the health and well-being of the animals. Medicines used to prevent or treat disease must be properly stored, labeled, and not expired in order for them to appropriately and effectively prevent, control, and/or treat diseases.

3.153(a)(1)(ix) Repeat

Primary enclosures.

Multiple enclosures housing several different species of birds had walls with exposed damaged plywood and/or particleboard that was not able to be effectively cleaned and sanitized. Primary enclosures must be constructed and maintained so that all surfaces in contact with the birds may be readily cleaned and/or sanitized in accordance with 3.158 or be replaced when worn or soiled.

3.158(a)(1) Repeat

Cleaning, sanitization, housekeeping, and pest control.

Ten primary enclosures, housing a total of 69 birds, were dirty with a buildup of wet excrement, food waste, and spider webs covering the walls and floors. Insufficient cleaning can lead to disease hazards, insects, pest and odors. Excreta

Inspection Report

and food waste must be removed from within, under, and around the primary enclosure often enough to prevent excessive accumulation.

3.160(b) Critical

Compatibility and separation

Approximately 3 weeks ago, a female Canada goose housed with 3 other Canada Geese and 2 Indian Runner Ducks was found dead floating in the enclosure's pool. When questioned, facility employees reported that seasonal aggression has been observed and believed the dead goose had been drowned by its cage mates. Animals housed in the same primary enclosure must be compatible and cannot interfere with the health of other animals or cause them discomfort.

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspection(s) or by Jul16,2024 (date the current license expires) or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
