Type: ROUTINE INSPECTION
Date: 30-JUL-2025

2.75(a)(2)

Repeat

Records: Dealers and exhibitors.

There is no record of the sale or disposition of 8 puppies that were present at the facility during the last inspection on April 29, 2025. There were 12 puppies at the facility during that inspection, and there are disposition records for the sale of 4 puppies on June 16, 2025, but the facility representative can not find records of the disposition of the other 8 puppies that are not longer at the facility. Accurate records of the disposition of dogs are important because they provide a record of movement of dogs between breeders, buyers, and facilities and are crucial in tracking disease outbreaks and monitoring veterinary care and disease prevention in the kennel. Each dealer shall use Record of Disposition of Dogs and Cats (APHIS Form 7006) to make, keep, and maintain information about all dogs that are sold or otherwise disposed of.

3.13(b)(2)

Veterinary care for dogs.

The facility did not keep adequate records for the medical care of 3 dogs. A facility calendar notes that "Snickers", a 3 year old female French Bulldog, had a prolapse on July 15-16, but there are no other medical records regarding the event. The facility representative did take the dog to the veterinarian and said Snickers was sent home with medications, but there are no medical records of Snickers' treatment, what medications were prescribed, or when those medications were given.

The calendar also notes that "Muffin", a 2 year old female French Bulldog, had a C-section June 18, 2025. The facility representative confirms that Muffin was sent home with medications, but there are no records of Muffin's treatment, what medications were prescribed, or when those medications were given.

A notebook mentions that "Princess", a 3 year old female French Bulldog, was taken to the veterinarian on June 17, 2025, for a lump on her neck and was "prescribed antibiotic", but there is no other medical record of the treatment, what medications were prescribed, or when those medications were given.

The completion of medical treatments and prescribed medications is very important for the health of dogs recovering illness or surgery. Adequate medical records help guide those administering the treatments and are used by USDA inspectors to confirm that treatments and medications prescribed for dogs are given properly and completely. Dealers must keep copies of medical records for dogs and make the records available for APHIS inspection. These records must include the date and a description of the problem, examination findings, test results, plan for treatment and care, and treatment procedures performed.

To be corrected by: August 8, 2024
