LYLE MILLER

Type: ROUTINE INSPECTION
Date: 15-AUG-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

1. A black female pug 'Rachel' born 5/1/12 has an accumulation of cream-colored mucus covering both eyes. The licensee stated that eye drop medication was currently being administered to treat the condition. The licensee has no documentation from a veterinarian regarding the use of eye drops to treat this dog. Not having clear vision can cause discomfort and affect the health and well being of the dog. The presence of eye discharge can be a sign of injury, infection or other potentially painful veterinary medical conditions. The potential for injury exists if the dog is not able to see clearly.

The dog has a thick brown material coating the cheek teeth and a recessed gumline. The abnormal buildup of material on the teeth can cause damage to the gum tissue and tooth structures, be painful, impact the ability of the dog to eat normally and harm the health of the animal.

2. A black female pug 'Eudora' (053-563-279) born 4/3/10 has an abnormal right eye. The eye appears sunk in and much smaller than the left eye. The abnormal appearance could be an indication of injury, infection, or other medical issues. The licensee stated the condition may have been caused from an injury when the dog was approximately less than 8 weeks of age.

There is a heavy coating of brown material on both sides of the cheek teeth extending up to the gumline. The abnormal buildup of material on the teeth can cause damage to the gum tissue and tooth structures, be painful, impact the ability of the dog to eat normally and harm the health of the animal.

3. A fawn female pug 'Barbara' (010-773-026) born 1/31/08 has an abnormal left eye. The eye appears sunk in and much smaller than the right eye. The abnormal appearance could be an indication of injury, infection, or other medical issue. The licensee stated the condition may have been caused from an injury when the dog was approximately less than 8 weeks of age.

There is a heavy coating of light to dark brown matter on the both sides of the cheek teeth. The abnormal buildup of material on the teeth can cause damage to the gum tissue and tooth structures, be painful, impact the ability of the

dog to eat normally and harm the health of the animal.

.

The licensee must have the above animals examined by a veterinarian to obtain an accurate diagnosis and appropriate treatment plan. The outcome of these consultations must be documented and provided to the inspector upon request.

To be corrected by: September 3, 2014.

Exit interview conducted with licensee.
