Type: ROUTINE INSPECTION
Date: 27-JAN-2015

3.127(c)

FACILITIES, OUTDOOR.

A significant amount of standing water was noted in a dry land area of the river otter enclosure. The excessive amount of water was the result of heavy rains that occurred five days previously. A dirt and debris mark was visible on the exhibit viewing window at a level that indicated flooding may also have occurred in this area during the recent rain.

The particular dry area of the enclosure effected by the standing water contains a drain that facility personnel stated is not sufficient to provide adequate and rapid drainage to this part of the outdoor exhibit. A suitable method of drainage for elimination of excess water must be implemented to prevent standing water and flooding of dry areas in the enclosure. Standing water and flooding can create unsanitary conditions and disease hazards which can adversely effect the health of the animals.

Correct by: May 2, 2015.

The inspection and exit interview were conducted with the mammal curator.
