Type: ROUTINE INSPECTION
Date: 15-JAN-2015

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A male poodle with microchip number 004887865 is observed to have an overgrown and matted hair coat. The matts are tightly bond and appear to pull at the skin. Matted hair is a painful condition and can lead to other health problems such skin infections and problems regulating body temperature. The licensee needs to appropriately address the matted hair coat for this dog and develop and maintain a grooming program that addresses the hair coat and skin health of all the dogs at the facility.

2.50(a)(2)

TIME AND METHOD OF IDENTIFICATION.

Eight weaned puppies have not be officially identified by tag, cage card or plastic collar. Lack of official identification does not allow for the proper identification or tracking of the animals. All weaned puppies must have some form of official identification. Correct by: January 22, 2015.

2.75(a)(1) REPEAT

RECORDS: DEALERS AND EXHIBITORS.

Microchip identification numbers for all fifty-one adult dogs currently at the kennel have not yet been recorded on the APHIS 7005 inventory forms. Eight puppy births have not been recorded on APHIS form 7005 or on cage cards. Also, there are six dogs that have only the name of the person or town from where they were acquired recorded and five dogs have no acquisition information recorded. Lack of accurate and up-to-date records does not ensure for the proper tracking of the animals. Update the facility inventory records with all required information and so they accurately reflect the current inventory of animals.

Inspection and exit interview conducted with the licensee.
