Customer ID: **10452**

Certificate: **41-C-0176**

Site: 001

QUISTORFFS LITTLE BITA EVERYTHING RANCH

Type: ROUTINE INSPECTION

Date: 31-MAR-2015

### 3.125(a)

#### FACILITIES, GENERAL.

Structural strength.

One enclosure housing an African Porcupine has smaller mesh attached to the section of fencing shared with an adjacent enclosure. The edge of the mesh in the corner by the wall has sharp points present that are protruding outward. Another enclosure housing two African Porcupines has nail heads exposed and protruding outward at the level of the animals from the right side wall when facing the enclosure. Both of these areas have physical hazards that could result in injury to the animals. The licensee must repair these areas to protect the animals from injury and ensure facilities are maintained in good repair. Correct by 7 April 2015.

### 3.131(c)

#### SANITATION.

Housekeeping.

The top fencing and ceiling in the majority of the animal enclosures had an overabundance of cobwebs and dust present. The buildup of cobwebs allows for easier accumulation of debris such as dust and sawdust shaving particles, which hinders husbandry practices and increases risk of fire due to their flammable nature. Remove cobwebs and dust and maintain on a more frequent basis to prevent such an accumulation, to facilitate prescribed husbandry practices and to protect the safety of the animals. Correct by 7 April 2015.

Inspection and exit interview were conducted with the owner.
