Type: ROUTINE INSPECTION
Date: 29-JUN-2021

3.1(c)(1)(i)

Housing facilities, general.

In Cheetah Complex 2, where a domestic dog is housed with a cheetah, there is excessive rust along the bottom edge of the metal dividing wall between bedroom 2 and the air conditioned room. This area of rust has been previously addressed with a temporary fix, but has rusted again and the permanent correction has not been completed. The facility addressed the rust by repainting during inspection, and is planning for the permanent correction. Rust can create structural issues and cannot be easily cleaned and sanitized as required.

Correct by 30 September 2021

This inspection and exit interview were conducted with the mammal curators.
