

## Inspection Report

James Swetter  
114 Swetland Road  
Clifford Twp, PA 18470

Customer ID: 9035  
Certificate: 23-C-0240  
Site: 001  
JAMES SWETTER

Type: ROUTINE INSPECTION  
Date: 27-MAY-2014

### 3.125(a)

#### FACILITIES, GENERAL.

Section 3.125(a) Structural strength: The following enclosures must be repaired.

1) The enclosure housing four deer (to the right of the house) has three fence post by the three sided shelter that are leaning outward away from the enclosure. This section of fencing is no longer standing upright but is leaning outward away from the enclosure. The deer may be able to run down the hill and jump over this leaning section of fencing and escape. The fence posts and fence must be repaired or replaced to ensure the fence is upright to contain the deer.

2) The enclosure housing 5 deer (the back right enclosure) has a three sided shelter that has the right side no longer secured to the right front post. The side of the shelter can move back and forth. The front of the lowest wood board on the right side is no longer attached to the frame. The right side of the shelter must be secured to the shelter frame to be structurally sound and to prevent injury to the deer. There are exposed points of nails from the right front shelter post that may injure the deer. There are also multiple exposed points of nails in the upper area of the shelter that may injure antlers in velvet if the deer rub their antlers against the inside of the shelter. The exposed nail points must be removed or hammered back to prevent injury to the deer.

Correct both by June 10, 2014.

An exit briefing was conducted with the owner.
