FACILITIES, GENERAL.

The raccoon was given a pillow which she shredded within 1 day. The fiberfill contents of that pillow was scattered throughout the enclosure. This loose fiberfill is not digestible and poses a potential risk of blockage or impactions in the esophagus, stomach, or intestines if this animal should ingest it.

A carpeted cat tower was also placed inside the fox squirrel enclosure yesterday. One (or both) of these animals also shredded the top platform leaving long strands of carpet backing jute. The actual carpet strands could not be found in the enclosure. These pieces of material can also pose a risk of blockage or impactions if the animals ingest it (these materials were immediately removed during the inspection).

All items that are placed within an enclosure shall be of such material & strength as appropriate for the habits & behaviors of any particular species within that enclosure to protect the animal from injury. Develop a plan and determine which types of materials, &/or bedding, can be used for each species of mammal to prevent the risk of
