Type: ROUTINE INSPECTION
Date: 03-AUG-2015

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A written program of veterinary care was not available for review at the time of inspection. There was no documentation available to indicate that the veterinarian had inspected the facilities in the past year.

Although the dogs appeared to be currently in good health, not having a veterinarian examine the animals at least once a year can put the dog at risk of disease not being diagnosed and treated.

It is vital to maintain a current program of veterinary care to ensure that adequate veterinary care is being given to the animals.

Contact the veterinarian and schedule an inspection and obtain a written program of veterinary care.

The program should include guidance on all medications and vaccines to be given as well as guidance on wound care, birthing concerns, oral care and other aspects of routine health care.

Contact the veterinarian by Close of Business August 4, 2015.

Obtain a written program of veterinary care by August 21, 2015.

Maintain records as needed to show compliance with the guidance provided by the veterinarian.

3.1(c)(2)

HOUSING FACILITIES, GENERAL.

The feeder for the dog in the top enclosure on the right hand side on the end by the window does not have a metal band around the feeder edge. The edge is chewed and is very rough. The rough surface can not be readily cleaned and sanitized.

All surfaces in contact with the dogs must be cleaned and sanitized on a regular basis to prevent disease.

Inspection Report

Repair or replace the chewed feeder.

Correct by: August 7, 2015

3.1(c)(3)

HOUSING FACILITIES, GENERAL.

The washdowns and pans under the pens for the dogs have a build-up of accumulated grime. The grime is a source of odor and can be a source of disease.

The washdowns and pans need to be adequately cleaned to remove the grime and prevent the accumulation.

Correct by: August 4, 2015

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

The front door of the kennel was propped open to allow a cross breeze. The open door however allows flies and other biting insects to enter the building. There were a large number of flies observed inside the kennel. Flies can bite and spread disease and are a source of nuisance and discomfort for the dogs.

Provide adequate pest control by closing the door or provide screening to eliminate the pests inside the building.

Correct by: August 4, 2015

Inspection and exit interview conducted with facility representative and ACI Linn.
