Type: ROUTINE INSPECTION

Date: 10-FEB-2025

### 3.13(a)(3)

#### Veterinary care for dogs.

The facility is not following the program of veterinary care for vaccinations. The Program of Veterinary Care currently prescribes dogs will be vaccinated for distemper, parvovirus, and rabies annually as a juvenile and then every 3 years going forward.

2 adult wolf/dog hybrids are not up to date on their rabies vaccine:

-Ozzy due date of 27 November 2024

-Lucian due date of 12 July 2024

1 adult wolf/dog hybrid is not up to date on their parvovirus and distemper vaccine:

-Lucian due date of 12 July 2024

Failure to follow the preventative care schedule for vaccinations in the Program of Veterinary Care does not ensure the dogs are receiving appropriate protection against contagious and deadly diseases such as distemper, parvo, leptospirosis, and rabies which can lead to illness and discomfort to the dogs. The facility must follow the vaccination schedule approved by the attending veterinarian in the Program of Veterinary Care to protect the dogs from deadly or contagious diseases.

The facility has not performed the annual fecal sampling for internal parasites and did not have the most recent sample results for review. The Program of Veterinary Care states fecal exams will be performed annually on 10% of the animals for intestinal parasites.

Failure to follow the parasite control program approved by the attending veterinarian may not properly protect the dogs from parasites and may allow illness to go undetected and untreated, which may cause pain and unnecessary discomfort to the dogs. The facility must follow the parasite control testing schedule approved by the attending veterinarian to protect the dogs from parasites and other pests (worms, coccidia, giardia and heartworm) and have the dogs tested annually.

## Inspection Report

---

The perimeter fence surrounding the primary enclosure of 2 red foxes failed to maintain the 3-foot minimum distance required under 3.127(d). The northern section in the rear of the enclosure and a portion of the western section of the primary enclosure is surrounded by a solid slatted wooden shelter structure acting as the perimeter fence. The wooden structure is approximately 6 inches from the primary enclosure fencing in these areas. There was no written approval for this variance from the 3-foot minimum distance requirement.

The perimeter fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it or under it and having contact with the animals in the facility, and so that it can function as a secondary containment system for the animals in the facility. It must be of sufficient distance from the outside of the primary enclosure to prevent physical contact between animals inside the enclosure and animals or persons outside the perimeter fence. Such fences less than 3 feet in distance from the primary enclosure must be approved in writing by the Administrator.

Correct by 13 June 2025

This inspection and exit interview were conducted with the facility representative.
