Certificate: **93-C-0024**
Site: 001
CITY OF ATASCADERO

Type: RE-LICENSE INSPECTION
Date: 11-OCT-2023

2.134

Contingency planning.

Although the facility does have a document developed for emergency response, the plan does not provide for the humane handling treatment, transportation, housing, and care of their animals in the event of an emergency or disaster as required. Lack of an appropriate contingency planning document could endanger the welfare of the animals within the facility in the event of an emergency or disaster. An appropriate plan must be developed that identifies the most likely situations the licensee might experience that would trigger the need for the measures identified in a contingency plan to be put into action including but not limited to emergencies such as electrical outages, faulty HVAC systems, fires, mechanical breakdowns, animal escapes, and natural disasters most likely to be experienced. It must outline specific tasks required to be carried out in response to the emergencies or disasters, identify a chain of command and who will be responsible for fulfilling the tasks, and address how response and recovery will be handled in terms of materials resources, and training needed.

Correct prior to 2nd relicense inspection

3.127(d)

Facilities, outdoor.

In several areas of the perimeter fence, there were gaps, trees, or objects that render the fence ineffective. An approximately 4 inch gap was noted on both sides of a gate in the perimeter fence that could allow potential ingress of unwanted animals. There were several trees and shrubs adjacent to the outside of perimeter fence that were overgrown and/or overhanging, decreasing the effective height. On the inside of the perimeter fence, there were roofing and other construction materials piled against the fence, as well as a large pile of rocks that also reduce the effective height of the fence. The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through or under it and having contact with the animals of the facility and so that it can function as a secondary containment system for the animals in the facility.

Correct prior to 2nd relicense inspection

3.153(a)(1)

Primary enclosures.

Multiple instances of exposed/protruding sharp points were observed within several avian enclosures that could lead to potential injury of the birds housed within: 1- The flamingo enclosure has temporary metal square mesh fencing in place

Inspection Report

with a section of protruding sharp ends; 2- a macaw enclosure has one metal nest box that the birds have chewed through one metal corner leaving exposed jagged edges, and a second wooden nest box that has been wrapped in sheet metal with exposed sharp edges; 3- a second macaw enclosure has damaged protruding sheet metal within the night quarters, exposed protruding staples, screws, and sheet metal edges on the outside of the night quarters, and exposed wire mesh with sharp edges around a door within faux rock and protruding above the faux rock within the enclosure. Multiple wild birds were also noted to have gained entrance into a large walk through aviary, potentially exposing the facility's birds to disease and or parasites. Primary enclosures for birds must be designed and constructed so that they are structurally sound and kept in good repair to protect the birds from injury, and prevent animals from entering that may negatively affect the welfare of the birds within.

Correct prior to 2nd relicense inspection

3.154

Environment enhancement to promote psychological well-being.

Although the facility does provide appropriate enrichment within the enclosures that addresses the requirements of the plan and they also have a document describing some aspects of the required plan, their document does not address the specific species group needs for each of the subsections of this regulation as required. The plan is necessary to ensure the psychological health and well-being of the birds. The facility must develop, document, and follow a species appropriate plan for environment enhancement adequate to promote the psychological well-being of birds. The plan must be approved by the attending veterinarian, and at a minimum must address social grouping, environmental enrichment, special considerations, restraint, and exemptions to the plan.

Correct prior to 2nd relicense inspection

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by November 10th or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
