### 2.134(a)

#### Contingency planning.

A documented contingency plan was not available at the time of inspection.

Failure to document a contingency plan could affect the facility's preparedness in the time of an emergency and subsequently affect the health and welfare of the facility's animals.

Exhibitors must develop, document, and follow an appropriate plan to provide for the humane handling, treatment, transportation, housing, and care of their animals in the event of an emergency or disaster (one which could reasonably be anticipated and expected to be detrimental to the good health and well-being of the animals in their possession).

Correct by: September 15, 2025.

### 3.56(b)(1)

#### Sanitation.

There is no sanitization program in place for four enclosures housing four adult rabbits, according to a facility representative.

Lack of enclosure sanitization introduces a contamination and health risk for the animals housed therein.

Primary enclosures for rabbits shall be sanitized at least once every 30 days by washing them with hot water (180 °F) and soap or detergent as in a mechanical cage washer, or by washing all soiled surfaces with a detergent solution followed by a safe and effective disinfectant, or by cleaning all soiled surfaces with live steam or flame.

Correct by: September 15, 2025.

### 3.125(a)

#### Facilities, general.

An enclosure housing 15 sheep, 16 goats, 1 pig, and 1 zebu needs repairs. The enclosure had several metal points extending into the primary enclosure. The enclosure also had an approximately 3 foot wide by 6 inch tall gap in between

top rail and the metal fencing.

These elements of the enclosure could injure the animals.

Facilities shall be maintained in good repair to protect the animals from injury and to contain the animals.

Correct by: October 1, 2025.

This inspection and exit interview were conducted with facility representatives.
