Type: ROUTINE INSPECTION
Date: 12-JUN-2023

2.75(b)(1) Repeat

Records: Dealers and exhibitors.

A current record of guinea pigs was not available for review during this inspection. A total of 418 adult guinea pigs, weanlings, and newborns were counted during this inspection. There were no inventory records kept or maintained since the previous inspection report. Failure to maintain these records makes it difficult to assess the health of the caviary by identifying animal losses by decreased number of guinea pig born, raised, or died. The licensee must maintain records containing the required information for animals which disclose the number of guinea pigs held, owned, acquired or disposed of including births and deaths. Remains uncorrected.

3.25(c) Repeat

Facilities, general.

Storage. There is an open bag of guinea pig feed on a pallet with a large hole in the bottom corner of the bag. Spilled feed is present on and under the pallet along with guinea pig droppings scattered on the floor. Failure to protect food and bedding supplies adequately can result in spoilage, deterioration, and/or contamination. Open bags of feed must be stored in containers with lids or covers to protect supplies from spoilage, deterioration, or contamination. Remains uncorrected.

3.29(d) Repeat

Feeding.

Feeding. The self-feeders on the sides of the guinea pig enclosures were covered with dust, dirt, and cobwebs. Failure to keep self-feeders clean can result in deterioration or contamination of the feed which can affect the health of the guinea pigs. All self-feeders must be kept clean, and self-feeders must be sanitized at least once 2 weeks. Remains uncorrected.

3.30

Watering.

There are accumulations of brown debris inside the PVC drainpipes around the automatic water nipples. Dirt and debris around the water nipples can expose the guinea pigs to potential infections with bacterial, fungi, and parasites. Water receptacles such as automatic water lines must be sanitized when dirty, and at least once every 2 weeks. Correct by June 13, 2023.

Inspection Report

3.31(b)

Repeat

Sanitation.

There are accumulations of dust, dirt, debris, and cobwebs on the sides of guinea pig enclosures, racks, walls, ceiling, window sills, self-feeders, and water drainpipes. Spilled feed is present on the floor of the animal room by the food storage pallet. Guinea pig droppings are present along walls, under animal racks, and around and under the food storage pallet. Animal facilities must be kept clean and in good repair to protect the health of the guinea pigs. Correct by ensuring the premises are kept clean, including: removing accumulations of dust, dirt, cobwebs, spilled feed, guinea pig droppings, and debris from surfaces and the floor of the animal room; and maintaining a level of general cleanliness to support good animal husbandry and health. Remains uncorrected.

This inspection and exit interview were conducted with the licensee.
