

Inspection Report

Montgomery Zoo
P.O. Box 3313
Montgomery, AL 36109

Customer ID: **3025**
Certificate: **64-C-0003**
Site: 001
Montgomery Zoo

Type: ROUTINE INSPECTION
Date: 23-APR-2024

3.125(a) Critical

Facilities, general.

The medical record indicates that on April 12, 2024 a male pygmy hippo was noted by the keepers as ataxic, circling, and appeared nonvisual. After the assessment, high differentials for cause of clinical signs included multiple water borne pathogens including *Listeria* and *Leptospirosis*. After communication with the attending veterinarian, it was confirmed that the water for moats and water features in multiple enclosures is obtained from a pond that is located on the zoo grounds with no filtration system. She explained that wildlife have access to the pond and without proper filtration of this water, there is concern for pathogen exposure to the animals. Correct by maintaining the facilities in good repair to protect the animals from injury. Correct by 5/7/2024.

3.131(d)

Sanitation.

An ant infestation was located in the Elephant Barn and the A6 Hoofstock Barn. Lines of ants were observed along multiple walls of the buildings and around hay storage. Insect pests can cause contamination and disease as well as discomfort to the animals. The facility must establish and maintain a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests. Correct by 4/30/2024.

3.153(a)(1)(iv)

Primary enclosures.

A wild squirrel was observed in the primary enclosure containing the Military Macaw. Prevention of wildlife from entering a primary enclosure prevents the sharing of disease, parasites, and pests. Primary enclosures must be constructed and maintained so that they restrict other animals from the entering the enclosure. Correct by 5/21/2024.

This inspection and exit interview were conducted with a facility representative.
