ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

The facility has an environmental enrichment activity document approved by the veterinarian, but it does not address the social grouping, special considerations, restraint or exemptions. The environmental enhancement plan to promote psychological well-being of non human primates must address each sub part under this regulation and be in accordance with currently accepted professional standards.

Correct by 5 May, 2017

3.125(a)

FACILITIES, GENERAL.

In one of the small clawed otter enclosures, the platform was broken, with a crack that could catch claws or feet and injure the otters. In another enclosure, the blue castle like toy was cracked, which could also catch claws and hurt the otters. In several otter enclosures, the rubber mats had evidence of chewed ends, creating an uneven surfaces that is difficult to clean and is no longer in good repair.

In the sloth, tamarin and lemur night house, fluorescent bulbs were not enclosed adjacent to the enclosures. If the bulbs broke, the glass is not contained within a cover and could cause injury to the animals.

In the 6 banded armadillo enclosures, there are several screws with sharp pointed ends protruding through the wall of the enclosure which has the potential to cause injury to the animals.

The facility is to create a system to keep the housing facilities in good repair, to be structurally sound and to protect the animals from injury.

Inspection Report

Several enclosures for the armadillos and cavy's are not within the existing perimeter fence. The enclosure fence is a combination of solid metal and fencing to protect the animals, but there has been no written approval from the Administrator to house these animals without a perimeter fence. A variance may be requested to the perimeter fence requirement.

The fence must be constructed so that it protects the animals in the facility by restricting animals and unauthorized persons from going through it, and so that it can function as a secondary containment system for the animals in the facility.

Correct by 1 October, 2017.

Inspection and exit interview conducted with facility representatives.
