FACILITIES, OUTDOOR.

The pot-bellied pig enclosure appeared very damp for having no rain in several days. When asked about the enclosure the licensee's representative explained that when it rains, runoff from the roof collects in the pot-bellied pig enclosure. The current enclosure is in a walled courtyard attached to the main building. This courtyard has a solid concrete wall approximately 8 feet high on all sides limiting air circulation at the ground level. A slatted wood awning slopes from the roof of the main building to the wall. The sides between the wall and the awning are composed of vertical wood slats.

A temporary shelter to protect the pig from inclement weather has been built but this does not prevent the area from becoming muddy during and after rain. Natural or artificial shelter appropriate to the climate and the species needs to be provided for all animals kept outdoors to afford them protection and to prevent discomfort to the animals. A more permanent solution for providing this pig with an enclosure that allows him to stay dry, warm, and out of the mud needs to be implemented. One alternative to considered is to cover the slatted awning with a solid material so that the rain does not runoff into the pig enclosure but to the outside of the courtyard allowing the pig enclosure to remain dry. The slatted sides between the wall and the awning could be left open for air circulation and a small house could be provided for additional warmth if needed.

To be completed by Aug. 8, 2015

Inspection and exit interview conducted with the licensee.
