### 2.131(e) Critical

#### Handling of animals.

An adult English Bulldog, Dozer, 7 years of age, was transported on HA25 from Portland (PDX), AWB173-35695225, arrived deceased at 4:00 PM at Honolulu (HNL) on 7/24/2022. The temperature was reported to range between 73/91 deg F at PDX between 6AM – 12 PM with a humidity of 71% and to range between 88/79 deg F at HNL between 12 – 6 PM with a humidity of 49 percent. The approximate flight time, not including drop off and pick up, was 6 hours and records show the flight was delayed by 3 hrs. A necropsy was performed on 7/24/22 at 7:07 PM by a local veterinarian. The likely cause of death, as stated in the report, “anticipated cause of death was asphyxiation secondary to respiratory distress, as can be common in brachycephalic breeds.” A brachycephalic middle aged dog is susceptible to the adverse health effects of increased stress and respiratory effort during travel. Animals must never be subjected to a combination of temperature, humidity, and time that is detrimental to the animal’s health, considering age, breed , and health status. The registrant must ensure that appropriate measures are taken to alleviate the impact of climactic conditions on the animals being transported.

This inspection and exit interview were conducted with the facility representative.
