Certificate: **33-C-0449**  
Site: 001

MEMORY LANE STABLES

Type: ROUTINE INSPECTION  
Date: 19-OCT-2016

### 2.40(a)(1)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

\*\*While reviewing the records it was noted that the program of veterinary care was not complete. In Section IV, Other Warm Blooded Animals, Part B (vaccinations) indicates to list the diseases for which the vaccinations are performed and the frequency of vaccinations, Part C (parasite control program) treatment and sampling, however, only monthly treatments are indicated. The program of veterinary care should reflect the appropriate vaccinations and parasite control program for the animals on hand. The program of veterinary care should be updated to accurately reflect the vaccination and parasite program for the animals. Lack of a complete program of veterinary care does not ensure that proper veterinary care is being provided in accordance with currently accepted veterinary medical standards.

Correct by: October 31, 2016

### 3.51(c)

#### FACILITIES, INDOOR.

\*\*Four rabbits are housed in an indoor facility with limited natural light and the artificial light above the enclosure was not in working order when the inspectors arrived. Rabbits shall have ample light by natural or artificial means and of good quality. The licensee must provide good quality light for the enclosed rabbits.

Correct by: October 26, 2016.

### 3.53(a)(2) REPEAT

#### PRIMARY ENCLOSURES.

\*\*The mat covering the wire mesh flooring in several rabbit enclosures was saturated with urine and dirty wood shavings. The rabbits have to walk through the wood shavings in order to access the water bowl. The rabbits do not have a clean surface to lay on or walk through to access food and water. The floor coverings should be maintained in a manner to allow the rabbits to be clean and dry while in the enclosure.

## Inspection Report

---

### 3.125(a) CRITICAL

#### FACILITIES, GENERAL.

\*\*The left side of the doorway to the arena entrance containing numerous goats, sheep, pigs and mini-horses was missing several cinder blocks exposing insulation and jagged edges. Several animals were observed rubbing against the fencing material attached to the wall that had protruding wire. Jagged, uneven edges and protruding wire has the potential to cause injury to animals housed in the area. Indoor facilities housing animals should be maintained in a manner to contain and protect the animals from injury.

Correct by: November 1, 2016

### 3.126(b) CRITICAL

#### FACILITIES, INDOOR.

\*\*There is a strong smell of ammonia in the area housing the goats, sheep and rabbits. The smell was strongest by the enclosure housing the sheep and goats. The shavings in the sheep and goat enclosure was soaked with urine and fecal material. The ammonia level was high enough to cause the inspectors' eyes and throat to burn upon entering the area. Ammonia at a level that causes irritation to the inspectors' eyes and nasal passages can be expected to cause similar irritation and discomfort to the animals. Although there was an open door there is no additional ventilation. This room must be properly ventilated and the source of the ammonia corrected to minimize odors and provide for the health of the animals.

CORRECT BY : IMMEDIATELY

### 3.130

#### WATERING.

Numerous water receptacles in several animal enclosures containing sheep, goats and pigs are in need of cleaning. The inner/outer sides and bottom surfaces are coated with a dark brown material. Drinking contaminated water can lead to disease and illness. All water receptacles shall be kept clean and sanitary.

Correct by: IMMEDIATELY

INSPECTION AND EXIT BRIEFING CONDUCTED WITH THE FACILITY REPRESENTATIVE.
