Certificate: **33-C-0382**  
Site: 001

CRITTER CAMP EXOTIC PET SANCTUARY

Type: ROUTINE INSPECTION  
Date: 07-OCT-2019

### 3.131(a)

#### SANITATION.

The raccoon enclosure contained excessive amounts of feces and fur. The feces were present on the plastic stairs within the enclosure. The fur was present on the front enclosure wires. Excessive feces and fur can harbor disease and produce odors.

The red foxes' enclosure contained abundant amounts of fur. The fur was concentrated on top of the transport kennel located within the black wire enclosure. Excessive fur can harbor disease.

In the kinkajous' enclosure, both animals' pouches are excessively stained. The licensee indicated the staining is the result of the animals scent marking. Scent marking build up, if left unchecked, can harbor disease.

Thoroughly clean and sanitize each of the enclosures. Clean, sanitize, or replace the affected enclosure contents.

To be corrected: 10-11-19

### 3.131(d)

#### SANITATION.

The facility doesn't have an effective program for the control of mice. The facility does have live mouse traps present, but they are not effectively controlling the mouse population. Excessive mouse feces were observed along the perimeter of the room containing the hedgehogs, the gerbil, the hamster, the chinchilla, and degus. Additionally, a mouse was observed inside of the chinchilla enclosure during the inspection. Mice can carry and spread disease.

Implement provisions that effectively control the mouse population at the facility.

To be corrected: 10-14-19

This inspection and exit interview were conducted with the owner.
