SEMINOLE, FL 33777

Customer ID: **323874**
Certificate: **58-C-1090**
Site: 001
VERNON YATES

Type: ROUTINE INSPECTION
Date: 26-MAY-2021

3.131(a)

Sanitation.

The enclosure housing two geriatric bears had accumulated an excessive amount of fecal matter. Fecal matter of varying chronicity (freshly produced to at least one day old) could be identified. The cement surrounding her rear end and directly under her was covered in various layers of feces - some of which had caked onto her fur.

Excess excreta can lead to odors, spread of disease and attract vermin. Excreta should be removed from the primary enclosures often enough to prevent contamination of animals and minimize disease hazards and odors.

Correct by June 2nd, 2021.

This inspection and exit interview were conducted with the licensee.
