2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The program of veterinary care (PVC) directs that Ivermectin should be administered to the adult dogs on a monthly basis for internal parasites. The licensee is currently only giving Ivermectin quarterly. The PVC documents other medication and supplements for parasite control and these other products are being given as directed and appear to be effective for intestinal parasite control. However, Ivermectin is the only product listed that would also be effective as a heartworm preventative.

Animals housed primarily outdoors in a heartworm endemic area would be at high risk for heartworm disease without the administration of an appropriate preventative. Ivermectin should be administered as directed by the PVC for control of internal parasites. Facility practices should accurately reflect the guidelines and provisions of the PVC in order to satisfy the requirements for adequate veterinary care under the Animal Welfare Act..
Correct by: July 22, 2017

The inspection and exit interview were conducted with the licensee..
