PREDATORS OF THE HEART

Type: ROUTINE INSPECTION

Date: 16-JAN-2018

3.127(c) REPEAT

FACILITIES, OUTDOOR.

After continued rainstorms, two of the outdoor enclosures that house 7 wolves do not have adequate drainage. The two enclosures are located on the west side of the facility, and the rain has soaked the soil to create muddy surfaces throughout much of these enclosures. Proper drainage is necessary to ensure the animals have clean, dry and comfortable enclosures at all times, and the accumulated mud promotes sanitation and husbandry issues.

The licensee must ensure that all enclosures have a suitable and effective method to prevent the accumulation of both water and muddy surfaces. To correct this issue, the licensee plans to strip the affected enclosures down to the rock surface, dig a trenching system utilizing pipes to remove the excess water, and cover the pipes with gravel and a wooden platform.

The facility's Wolf Encounter Experience is under review.

This inspection and exit briefing were conducted with the facility representative.
