HIDDEN VALLEY ANIMAL ADVENTURES

Type: ROUTINE INSPECTION
Date: 25-OCT-2016

3.58(a)

CLASSIFICATION AND SEPARATION.

Twenty four adult rabbits are housed together with multiple bird species in an outdoor primary enclosure. Rabbits are a prey species and can become easily stressed when housed with other species. Some birds can be territorial and may peck/injury the rabbits. The bird feces may also contaminate the food for the rabbit and the surfaces of the enclosure. Fecal material may contain bacteria and parasites and cause the rabbit to become ill. On inspection, the rabbits did not appear stressed by the presence of the birds and no harmful interactions between the two species were seen. Rabbits must not be housed in the same primary enclosure with another species unless required for scientific reasons.

Correct by 8 November 2016

3.125(a)

FACILITIES, GENERAL.

The feeder in the field containing the Alpacas and Dromedary Camel was damaged along the bottom. This damage has created sharp edges on multiple sides of the feeder along the ground. These damaged areas could cause a significant cut or other injury to the animals. The facility must be constructed of such material to protect the animals from injury.

Correct by 25 November 2016

This inspection and exit interview were conducted with the Assistant General Manager.
