Cedar Creek, TX 78612

Customer ID: 332212
Certificate: 74-C-1010
Site: 001
Capital of Texas Zoo L L C

Type: ROUTINE INSPECTION
Date: 28-OCT-2015

2.40(b)(3)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

There are two male guinea pigs that have old wounds on their hindquarters and appear to have scabbed over. The licensee stated that he has not seen these wounds before. The licensee must observe all animals daily to assess their health status. The licensee must also establish a mechanism of direct and frequent communication with the attending veterinarian, so that timely and accurate information on problems of animal health, behavior and well-being is conveyed in an accurate and timely manner.

Correct from this day forward.

2.40(b)(4)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The program of vet care states "Blunt Force Trauma" as a form of euthanasia for guinea pigs by the licensee. The licensee said that he does not do blunt force trauma but it is written on the program of vet care. Blunt force trauma is not an approved method of euthanasia for guinea pigs. This facility currently has multiple species and the current program of vet care does not state the method of euthanasia that will be used for each of these species. The program of veterinary care does indicate beuthanasia as the form of euthanasia performed by the attending veterinarian but does not state which species to be euthanized. The attending veterinarian must approve in writing the methods of euthanasia to be performed, who will perform the euthanasia of regulated species and said persons must be properly trained in the methods of euthanasia. It should also reflect drug name, route, and dosage.

Correct by Nov 27, 2015

3.33

CLASSIFICATION AND SEPARATION.

There are two male guinea pigs that are housed together with female guinea pigs. Both of the male guinea pigs have old wounds on their hindquarters that appear to be scabbed over. The licensee told the inspectors that the wounds were caused by the two male guinea pigs fighting. Animals that are incompatible in the same enclosure

Inspection Report

puts the animals at risk of injury. Animals that are housed together must be compatible and maintained in compatible groups.

Correct by Nov 2, 2015

3.130

WATERING.

The dingo water receptacle had a dead rat inside of the water receptacle. Rodents can harbor disease causing organisms and could cause potential contamination in the potable water receptacle. Contaminated drinking water may pose a health risk for the animals. All water receptacles shall be kept clean and sanitary.

Non-Compliant Item corrected at the time of inspection.

Inspection and exit interview conducted by APHIS personnel with licensee.
