Type: ROUTINE INSPECTION
Date: 10-JUL-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Two Saint Bernard dogs have open wounds on their noses. Both dogs, a male (microchip #093 332 617) and a female (microchip #093 347 352) have open wounds on their muzzle, right before the wet naked surface around the nostrils. The wounds are very red and appear to be still raw. The owner has talked to his veterinarian about this, the conclusion they have made is the open wounds are caused by flies. Owner may have to move these dogs into area that is free from flies until the healing has been completed. (No flies were noticed at the time of this inspection.) The owner needs to have at least one of these dogs seen by a veterinarian to help get these open wound healed, set up a program for both dogs and administer the appropriate medication. Keep a record of what has been done to help heal these dogs. This program needs to be available to the inspector on the next inspection. Correct by 07-14-2014

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

At least one water bowl needs cleaned and sanitized. The water bowl in the enclosure housing the young male Saint Bernard, Fatts III, has a green/dirty looking covering inside. The water has a slimy green look. This water container needs to be cleaned and sanitized. All food and water receptacles must be cleaned and fresh water added daily. All food and water receptacles must be sanitize at least every 2 weeks and more often if needed to help in the good health of dogs. Correct by 07-11-2014.

This inspection and exit briefing were conducted with the owner.
