Certificate: 74-C-1023

Site: 001

Wildlife Refuge & Sanctuary Silver Wolf Inc.

Type: ROUTINE INSPECTION

Date: 04-FEB-2020

### 2.40(b)(3)

#### REPEAT

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The skin on the end of the black leopards tail is red and the hair is missing. The reddened skin and hair loss may be an indication of an infection or allergies which can cause the animal to lick and further irritate the area. A facility employee with veterinary training was aware of this condition last week, however the attending veterinarian had not been notified the leopard has a medical issue. No treatment has been provided. It is important to notify the veterinarian of issues so appropriate treatment plans can be developed and followed. The daily observation of animals may be accomplished by someone other than the attending veterinarian but a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian.

### 3.125(a)

#### FACILITIES, GENERAL.

The resting board in the lock out area for the white tiger is clawed and is splintered. There are exposed nails in the bridge in the black leopard enclosure . There is a nail protruding from the top of the resting bench in the tiger enclosure ( next to black leopard ) . The exposed nails and splintered boards are areas that may cause injury to the animals. These must be repaired or replaced and enclosures maintained in good condition to prevent injury to the animals .

CORRECT BY : 2-11-2020

The inspection and exit briefing were conducted with the facility secretary .
