Site: 001
JEFFREY & JUDY GRAY

Type: ROUTINE INSPECTION
Date: 16-JUL-2014

2.40(x) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***There was an individually housed male English Bulldog (#036*010*061) that was squinting his right eye and rubbing at it with his paw. On closer observation, there was a slight amount of greenish white discharge at the bottom of the eye. A cloudy bluish grey lesion was present within the central left portion of the eye. The surrounding tissues (conjunctiva) of the right eye also appeared slightly reddened and inflamed. According to the licensee, she had not noticed the dog's eye prior to the inspectors pointing it out. The licensee also noted that the dog's eye condition may have resulted from an aggressive episode between this dog and another dog with which it had been housed with yesterday.

***There was a female Yorkshire Terrier (#0A01403513) that was squinting her left eye. On closer observation, there was some greenish white discharge surrounding the left eye. Most of the eye appeared dark bluish grey in color; the iris and pupil were difficult to visualize. An approximately pinpoint sized concave lesion was located centrally on the surface of the eye. According to the licensee, she had just noticed the dog's left eye during the inspection and noted that it may have resulted from a fight with another dog it had been housed with the previous day.

The lesions on these dogs' eyes could indicate an injury, illness or other veterinary medical condition which may be painful. Neither of these dogs had been examined by a veterinarian for their current conditions nor were they under any type of treatment at the time of inspection.

The licensee must have these dogs seen by a licensed veterinarian no later than July 19, 2014 in order to ensure that accurate diagnoses are made and that appropriate treatment plans are developed and followed.

3.11(d)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

(d) Pest control.

In the food storage building, there was a full bag of dog food that had a golf ball size hole on the top of the bag.

Inspection Report

Next to the hole in the bag, was shredded bag material and what appeared to be rodent feces. Rodents can contaminate the food and spread diseases. Licensee must establish and maintain an effective program for the control of pests.

To be corrected by: July 20, 2014.

Veterinary care for male Yorkshire Terrier (#095*097*779), female Yorkshire Terrier (#0A01317168) and female Shih Tzu (#145532122A) and English Bulldog (#0A01651705) from the April 2014 inspection have been addressed.

The inspection and exit interview conducted with licensee.
