Site: 001
FRANKLIN & WILMA SARY

Type: ROUTINE INSPECTION
Date: 14-MAR-2022

3.131(a) Repeat

Sanitation.

During the course of the inspection, an overall lack of sanitation was witnessed. Excreta and hair were observed collected and caught through the wire floors of multiple cages, and a dried brown mushy substance which had the appearance of dried fecal material was present on the tops of a many of the nesting structures inside the cages which are round capped pieces of pvc pipe, approximately 4-5 inches round. Pests and rodents were present and feeding off of the excreta and food waste in two of the rooms. Inadequate sanitation poses a direct health and safety hazard to the animals. Animals that are subjected to soiled enclosures and food can become distressed, or sick. All enclosures and rooms must be adequately cleaned and sanitized and a proper sanitation program must be maintained.

This inspection and exit interview were conducted with licensee.
