Type: ROUTINE INSPECTION
Date: 11-APR-2022

3.54(b)

Feeding.

There is a single male rabbit housed in a rabbit hutch. There is a self feeder in the rabbit hutch that has a large area, approximately 1/4, of caked feed on one side.

If self feeders are used for the feeding of dry feed to rabbits, measures must be taken to prevent molding, deterioration or caking of the feed.

Clean self feeders for rabbits often enough to prevent caking of the food. Caked rabbit feed has deteriorated and may not contain complete nutrition.

Corrected at time of inspection

3.82(c) Critical

Feeding.

Since the last inspection a squirrel monkey was euthanized. A necropsy was performed by Michigan State University. The necropsy report stated that "The gross and histologic findings are consistent with trauma and a chronic negative energy balance."

Inspection Report

If members of dominant nonhuman primate or other species are fed together with other nonhuman primates, multiple feeding sites must be provided. The animals must be observed to determine that all receive a sufficient quantity of food.

All non-human primates must be fed a sufficient quantity of food, and observed to ensure they are consuming an appropriate amount of food to maintain their health.

To be corrected from this day forward, April 14, 2022

3.84(a)

Cleaning, sanitization, housekeeping, and pest control.

The primary enclosure for the 3 squirrel monkey has excess food and feces on the floor, and the elevated platform.

Excreta and food waste must be removed from inside each indoor primary enclosure daily and from underneath them as often as necessary to prevent an excessive accumulation of feces and food waste, to prevent the nonhuman primates from becoming soiled, and to reduce disease hazards, insects, pests, and odors.

Feces and excess food waste must removed from indoor primary enclosures daily to prevent soiling of the primates, reduce disease hazards, and odors.

To be corrected by April 15, 2022

3.125(a)

Repeat

Facilities, general.

Inspection Report

The primary enclosure for the two African crested porcupines has a guillotine door to the outside area of the enclosure.

The inside of the door, in the lower right hand corner, has metal that is bent up and causing sharp points.

The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

Ensure that all areas of the enclosure are maintained in good repair to prevent injury to the animals contained.

3.126(d)

Facilities, indoor.

The area where the grain, and water are kept for the 7 cows has deep mud that the cows have to walk through to access there grain and water.

A suitable sanitary method shall be provided to eliminate rapidly, excess water from indoor housing facilities.

Animals must have clean dry access to food and water to ensure they are properly hydrated, and receiving proper nutrition.

To be corrected by April 16, 2022

3.130

Watering.

The water receptacles for the 6 cows, the 8 zebu with 5 alpaca, and the 3 camels have excessive organic material growing in them, with some of the green colored material floating on the surface of the water.

Inspection Report

All water receptacles shall be kept clean and sanitary.

Water receptacles must be kept clean and sanitary to ensure animals are properly hydrated to prevent discomfort and disease.

To be corrected by April 12, 2022

3.131(a)

Repeat

Sanitation.

- The shelter in the primary enclosure for the 3 camels has excessive feces and urine in it. There is a strong odor present in the area.
- There is a single cow housed with an Asian water buffalo in a barn with no access to the outside. The cow and buffalo are standing on approximately 16" of manure pack.
- There are 2 intact, male goats that are housed in a barn and are standing on approximately 12" of manure pack.

Excreta shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

Manure and wet, soiled bedding must be removed from primary enclosures to prevent contamination of the animals, minimize disease hazard and reduce odors

This inspection and exit interview were conducted with a facility representative.
