Type: ROUTINE INSPECTION  
Date: 27-SEP-2024

---

### 2.40(a) Repeat

#### Attending veterinarian and adequate veterinary care (dealers and exhibitors).

The facility has entered a formal agreement with a local attending veterinarian (AV), but at the time of the inspection the facility does not have a written program of veterinary care (PVC) approved by their current AV.

Facilities with part-time veterinarians are required to have a written PVC for animals. The program supports the veterinarian's authority and ensures that animals receive adequate care. The PVC may direct the facility in vaccine requirements, internal and external parasite control, emergency care provisions, euthanasia guidelines, or other topics affecting animal health and welfare.

The facility must establish and maintain a written PVC approved by their AV by October 2, 2024.

### 3.1(f)

#### Housing facilities, general.

The trash receptacle in the food storage and preparation area adjacent to the fridges and freezers has no lid. Trash receptacles without lids could create odors and attract pests such as flies, cockroaches, and mice. Pests may transmit diseases to animals or can harbor or spread parasites and disease-causing microbes, which may contaminate food and food prep areas and cause injury or illness to the animals.

Trash containers in feline housing facilities and in food storage and food preparation areas must be leakproof and must have tightly fitted lids on them at all times. The licensee must add a tightly fitted lid to the trash receptacle and ensure the lid remains in place at all times.

Correct by October 2, 2024

### 3.150(f)

#### Facilities, general.

The trash receptacle in the storage room adjacent to the budgie and eclectus macaw enclosures has an open trash can containing uneaten bird food. This could create odors and attract pests, such as flies, cockroaches, and mice, who may

---

transmit diseases to regulated animals.

Trash containers in housing facilities and in food storage and preparation areas must be able to contain trash securely to minimize odors and be inaccessible to animals and pests. The licensee must modify the trash receptacle to ensure that the receptacle remains inaccessible to animals and pests.

### **Environment enhancement to promote psychological well-being.**

At the time of inspection, the facility does not have a written environment enhancement plan (EEP) approved by their current attending veterinarian to promote the psychological well-being of their avian species as required by the Animal Welfare Act.

Dealers, exhibitors, and research facilities must develop, document, and follow a species-appropriate EEP adequate to promote the psychological well-being of birds. The plan must be approved by the attending veterinarian and must be in accordance with the regulations in this subpart and with currently accepted professional standards as cited in appropriate professional journals or reference guides. This plan must be made available to APHIS upon request, and, in the case of research facilities, to officials of any pertinent funding agency. The plan, at a minimum, must address each of the following: social grouping, environmental enrichment, special considerations, restraint devices, and exemptions.

An EEP is important in avian care and welfare by providing birds with stimulation and opportunities for species-typical behaviors. This helps promote mental and physical health, reduces stress, encourages natural behaviors, and improves social interaction. The EEP should be updated as needed and be implemented in a manner that provides variety for the birds.

Correct by October 2, 2024.

This inspection and exit interview were conducted with facility representatives.
