PHILIP SMITH

Type: ROUTINE INSPECTION
Date: 08-NOV-2016

3.131(a)

SANITATION.

There is a moderate to heavy accumulation of fecal material in the back third of a sheep enclosure. Although the facility is following a regular cleaning schedule, more frequent cleaning of the enclosure is needed. Accumulations of fecal material may increase disease hazards to animal areas.

Excreta should be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

To be corrected by December 1, 2016

This inspection and exit interview were conducted with the facility representative.

Additional Inspectors

Schnell Michael, Veterinary Medical Officer
