

## Inspection Report

Oak Mountain State Park  
200 Terrace Drive  
Pelham, AL 35124

Customer ID: **327265**

Certificate: **64-C-0214**

Site: 001

OAK MOUNTAIN STATE PARK

Type: ROUTINE INSPECTION

Date: 15-SEP-2015

### 2.131(c)(1)

#### HANDLING OF ANIMALS.

\*\* The primary enclosure containing 3 pigs has a sign stating that they bite. The facility is a petting zoo but the pigs are not to be petted. The pigs enclosure is constructed of fencing material that can allow the public to put their hands through it. There isn't any public attendant present or public barriers in place to ensure that no one will put their hands in the enclosure and get bit. The pigs exhibit should have sufficient distance and/or barriers between the animal and the general viewing public so as to assure the safety of the animals and the public. Correct by October 1, 2015

### 3.125(a)

#### FACILITIES, GENERAL.

\*\* There were two young goats outside of their primary enclosure. When the goats were placed back in their primary enclosure they immediately jumped out again. These young goats can't be properly contained in their enclosure because the fencing is too short. These younger more agile goats require a fence high enough to appropriately contain them. Correct by October 16, 2015

### 3.125(c)

#### FACILITIES, GENERAL.

\*\* In the storage facility there were bags of feed, bedding and mineral blocks that were being stored on the ground. One bag of feed had been chewed through and the feed had spilled on the ground. There was rodent feces on the mineral blocks as well. The feed, bedding and mineral blocks should be stored to keep it from becoming contaminated by vermin. The storage facility may also need to be repaired and/or replaced to ensure the facility is sealed from vermin getting in to access the feed or bedding. Correct by October 1, 2015.

### 3.131(d)

#### SANITATION.

\*\* The storage facility for the feed and bedding had an abundance of rodent feces along the walls, in the corners

## Inspection Report

---

and on the mineral blocks. There was a bag of feed that had been chewed through and the food had accumulated on the floor. There were many holes under the doors and in the walls that could be allowing the pests access to the feed. A safe and effective program for the control of mammalian pests shall be established and maintained. Correct by October 1, 2015.

The inspection and exit interview was conducted with the park manager and animal care staff.
