GILCREASE NATURE SANCTUARY

Type: ROUTINE INSPECTION
Date: 07-JAN-2016

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The following animals are in need of nail/hoof care. The mule deer, Bambi, has overgrown hooves on all four feet including an abnormal curvature of the rear dewclaws. A black pig, Tiny, has overgrown hooves on all four feet. A brown, female llama has slightly overgrown toenails of both hind feet with abnormal curvature of the lateral nails. The overgrowth of hooves/nails may cause the animals discomfort and lead to injuries or lameness if not appropriately addressed. The facility shall establish and maintain an adequate program of veterinary care that includes timely hoof/nail care and trimming when needed.

3.125(c)

FACILITIES, GENERAL.

-Inside the food storage trailer, there was an open bag of a feed additive (Diatomaceous Earth) used for covered species. There was an accumulation of dirt and debris on food storage shelves, on the floor and on walls adjacent to bags of feed. Also several cobwebs were noted on the ceiling and in corners above stored food.
-There were several, stacked bales of hay which were not adequately covered or protected by the existing tarp. There has been steady rain the past few days in the local area which may potentially cause molding and deterioration of the hay.

Supplies of food or food supplements must be stored in facilities which adequately protect such supplies against deterioration, molding or contamination by pests to ensure the health and well-being of all animals. A system of food storage which adequately protects the supplies of food for all animals must be in place.

Inspection Report

3.131(d)

SANITATION.

-A kitchen and an adjacent room with animal medical supplies had an excessive accumulation of rodent feces on the floor, along baseboards of walls, in corners, and behind cabinets.

-There were several areas of bird feces within a food storage trailer including on the floor, on the outside of bags of feed and bedding, on a wooden, platform shelf as well as inside an open container of a bird diet. During inspection, a few, free-roaming chickens attempted to enter the food storage trailer once the door was left open.

Control of all pests including vermin and avian is needed to reduce contamination and potential disease hazards and to promote the health and well-being of the animals. An effective program of pest control must be established and maintained.
