Type: ROUTINE INSPECTION
Date: 27-JUN-2016

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

An 8 year old New Zealand White rabbit "Sugar" housed in an outdoor wire bottom cage has two small circular areas of red skin and alopecia on the left and right hocks. The rabbit also has mild urine staining on the rear legs and tail area.

The veterinarian should be consulted to evaluate this animal to prevent further problems.

Correct by 7/3/16.

3.53(a)(1)

PRIMARY ENCLOSURES.

A heavy accumulation of feces, fur and urine was observed on the lower right corner of a primary rabbit enclosure. Within the center of matted accumulation of excreta was a hole in the wire bottom floor approximately 2" in diameter. Primary enclosures need to be maintained in good repair to protect rabbits from injury and to contain them.

The rabbit was moved to a different cage at the time of inspection. No other rabbits should be housed in this cage until repairs are completed.

3.56(a)(3)

SANITATION.

All outdoor wire bottom rabbit cages had excessive accumulations of excreta under the enclosures. Areas under these enclosures should be cleaned at least weekly to maintain sanitary conditions for animal health and well being. Cleaning initiated at time of inspection. Correction by 6/28/16.

Exit interview conducted with owner.
