DIANA FRIELING

Type: ROUTINE INSPECTION

Date: 31-JAN-2018

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

One yak had overgrown hooves. One back hoof was severely overgrown and misshapen.

Excessively long and misshapen hooves are susceptible to breaking and cracking and also place abnormal stresses on joints and tendons. The facility should ensure that routine hoof care is provided to all animals.

Correct by February 19, 2018.

3.125(a) REPEAT

FACILITIES, GENERAL.

Two enclosures holding hoof stock were in disrepair. Two broken boards and a section of crumpled wire fencing were observed in an enclosure housing one bison and one zebu. Pieces of broken wire were protruding into the enclosure. A section of heavy gauge welded wire fencing had approximately one inch tines protruding into an enclosure housing two sheep.

Animals may become entangled in broken fencing and sharp points may cause lacerations or puncture wounds. Enclosures should be routinely monitored for defects and repairs should be made in a timely manner.
