Certificate: 35-C-0189
Site: 001
EXOTIC ENTERPRISES, INC

Type: ROUTINE INSPECTION
Date: 11-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

A female coatimundi had a crushing injury to the tip of her tail that reportedly took place a week ago. It was reported to be treated with a topical treatment, but the injury had not been reported to the Attending Veterinarian. Lack of communication with the attending veterinarian regarding injuries or health conditions does not ensure an affected animal receives adequate treatment.

Correction: Contact the Attending Veterinarian to have him/her observe the affected coatimundi's tail and provide documentation of his/her treatment suggestions. Maintain direct and frequent communication with the attending veterinarian regarding animal health problems and injuries.

To be corrected: 6/13/14

3.80(a)(2)

PRIMARY ENCLOSURES.

The door on a lemur's enclosure (left side of enclosure while facing it) does not close tightly on the top outer corner. This leaves a large gap (2-3 inches) that could provide an area for a lemur to escape or cause injury to itself on. Maintain enclosures structurally sound to prevent injury and contain non-human primates securely.

Doors on lemur enclosures must be repaired/replaced so that that it seals tightly.

To be corrected: 6-13-14.

3.125(a)

FACILITIES, GENERAL.

1. There is a hole in the wooden wall in the wallaby enclosure. The hole, approximately six inches wide by three inches tall, is located along the back wall on the enclosure. The wallaby could potentially injure itself on the edges of the hole.

Prepared By: CHAD MOORE, A C I USDA, APHIS, Animal Care

Inspection Report

Repair or replace the affected area of the wallaby enclosure.

To be corrected: 6-16-14

2. The llama shelter is in disrepair. A section of the wooden roof is rotted and warped. This has resulted in a hole, approximately six inches in diameter, in the roof exposing rain into the shelter. The shelter in its present condition is not completely protecting the llama from the rain.

Repair or replace the affected area of the llama shelter.

To be corrected: 6-30-14

3. The porcupine enclosure is in disrepair. An area of buried wire fencing has been dug up by the porcupines. The unburied fencing has exposed sharp metal points to the animals. Additionally, the walls of the enclosure are comprised of half inch by half inch wire. A three inch section of the wires has broken exposing sharp metal points to the animals. The animals could potentially injure themselves on these areas.

Repair or replace the affected areas of the enclosure.

To be corrected: 6-16-14

The inspection exit briefing was conducted with the facility president

Additional Inspectors

Maxwell Kelly, Animal Care Inspector

Welch Scott, Veterinary Medical Officer
