Date: 04-AUG-2025

3.131(a)

Sanitation.

An outdoor enclosure housing a Coatimundi has an excessive accumulation of feces and waste covering the floor area of the shelter structure. This is a potential source of contamination to the enclosed animal. Excreta and feces shall be removed from primary enclosures as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors. The licensee must clean the shelter and ensure that an adequate cleaning and sanitization schedule is maintained at all times.

3.131(d)

Sanitation.

An outdoor enclosure housing a Coatimundi has a large wasp nest attached to the inside roof of the enclosure. The nest contains numerous live wasps and wasps were observed flying throughout the enclosure. This is a potential source of injury to the enclosed animal. The licensee must remove this active nest and ensure that a safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests be established and maintained.

This is a 1st Re-License Inspection for a Class "C" license. The inspection and exit briefing were conducted with the applicant.

All items must be in compliance within 2 more inspections or by October 3, 2025, or the applicant will forfeit the license fee and must wait 6 months to reapply. Please contact your inspector to schedule your next Re-License Inspection.

Regulated activity can continue under your existing USDA license until it expires.
