Site: 001  
JUNGLE EXOTICS

Type: ROUTINE INSPECTION  
Date: 30-JUL-2015

### 2.40(a)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The approved written Program of Veterinary Care (PVC) did not include llamas and deer. All covered species should be addressed in the PVC to ensure the facility has a program to follow concerning the care of all the animals. Failure to do so could adversely affect the health and well-being of the animals. A complete and accurate written Program of Veterinary Care with consultation from the attending veterinarian must be in place.

Correct by 09/05/2015

### 3.1(a) REPEAT

#### HOUSING FACILITIES, GENERAL.

-Wooden shelter boxes in the outdoor dog kennels for canines, Charlotte and Golden Retriever #1 had large openings or holes in the elevated, wood platform flooring inside these shelter structures. These openings are located just inside the entrance and contain ragged, splintered wooden edges.

-The top of the entrance opening to the shelter box for canine, "Ashes" had heavily worn jagged edges. Also there was a heavily, worn and ragged wooden platform in disrepair adjacent to this shelter box which had a hole/opening in one corner with chewed, splintered edge pieces.

The facility owner stated that these dogs have created these large openings/holes in the shelter box's flooring and in the raised platforms from consistent chewing and digging. The large openings and splintered, jagged wood may cause an animal to become injured or entrapped. Housing structures for dogs must be designed and constructed to be structurally sound. They must be kept in good repair, and they must protect the animals from injury. A system of maintenance and repair of housing facilities must be in place.

### 3.1(c)(3)

#### HOUSING FACILITIES, GENERAL.

The indoor cat area: All three rooms of this indoor facility had several cobwebs on ceilings and walls. There was a

---

buildup of a dirty, brownish, oily grime on several ledges/sills and on lattice panel dividers in a room housing several hairless (Sphynx) breed cats. One room contained a chair which was heavily worn with shredded fabric and exposing the underlying foam-type cushioning. Animal areas inside of housing facilities and adjacent areas or objects within animal areas must be kept clean to ensure the health and well-being of the animals. All surfaces that come in contact with the cats must be spot-cleaned daily. These areas must be cleaned more frequently and sanitized every two weeks.

### 3.6(a)(2)(1) REPEAT

#### PRIMARY ENCLOSURES.

The outdoor,dog kennel for a canine, Tula , had several, exposed, protruding wires in an approximately 8 inch section along a lower portion of the chain link fencing.The primary enclosures must be constructed, kept in good repair and maintained to ensure no sharp points from protruding wires cause the animals to be injured,trapped, or harmed. Licensee stated that "Tula" would be moved to a different enclosure until repairs are made to this kennel. A system of maintenance and repair of all primary enclosures must be in place.

### 3.125(a)

#### FACILITIES, GENERAL.

-A wooden den box used for a Lion, Zuma, had worn, ragged splintered edges with exposed nails along the bottom portion of the entrance.

-Enclosure #17 housing a red fox contained a wooden den box with one side which has partially separated from a corner. The separated wood panel is creating a protruding cornered, edge as well as a gap with exposed underlying nails.

Sharp points from the exposed nails and splintered edges or gaps in the wood may pose a risk of harm or injury to the animals. All parts of the primary enclosures must be constructed,kept in good repair and maintained to ensure the safety and well-being of the animals. A system of maintenance and repair must be in place.

### 3.131(a) REPEAT

#### SANITATION.

A pen housing two llamas has an excessive buildup of excreta within the pen. Also, there was a large amount of excreta piled up directly outside of and directly next to this pen which attracted an increased presence of flies to the area. Excreta should be removed as often as necessary to prevent contamination of the animals contained and to reduce disease hazards and reduce odors. The cleaning schedule of this enclosure should be more frequent and
