Type: ROUTINE INSPECTION
Date: 16-MAY-2017

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Eight Guinea pigs were found in need of veterinary care:

- *One grey and white adult in pen H(1) has extensive hair loss
 - *One white and black adult in pen H(5) has extensive hair loss
 - *One brown/black/white adult in pen G(10) has a large mass under its chin
 - *One white/brown/black adult in pen F(5) has extensive hair loss. The left eye of a brown and white adult, also in this pen, is only partially open, is moist and red rimmed.
 - *One white/brown/gold adult in pen C(1) has scabs and hair loss on the left side of its face bordering its nose.
 - *Two juvenile guinea pigs, one white/black in pen I(1) and one black/white in pen A(4) are moribund. They are unable to rise and breathing rapid & shallow. They are also intermittently twitching or paddling their feet.
- Licensee contacted the Attending Veterinarian, who said he would come by today.

The above listed guinea pigs need veterinary treatment for their health and well being. They must be examined by a licensed veterinarian for evaluation and treatment. Documentation of the veterinarians diagnosis, treatment, and plan, shall be maintained for examination by APHIS officials. There were also eight guinea pigs divided into two "sick pens" but no treatment records were available. Licensee stated they are being treated with Uniprim and supplemental vitamin C. Some notes are kept on notebook tablets on each rack, but they are difficult to interpret. Every facility should have a system of health records sufficiently comprehensive to demonstrate the delivery of adequate health care.

Correct by: May 17, 2017

This inspection was conducted with Licensee's wife and exit interview were conducted with Licensee via telephone
