NOMAD'S ANIMAL ENCOUNTER
LLC

Type: ROUTINE INSPECTION

Date: 03-JUL-2024

3.125(a)

Facilities, general.

There are structural problems in several areas of the facility.

- The enclosure fence housing sheep, goats, and emus has loose strands of barbed wire along the section of fence bordering the road. This is a potential source of injury and/or entrapment to the enclosed animals.
- The sheep/goat/emu fence itself is sagging in several places, most notably behind the pond in the rear of the facility. The fence also has multiple gaps between the wire and the ground. The fence must be maintained in good condition to help contain the enclosed animals, and to prevent outside animals from gaining access to the enclosure.
- There are exposed wire ground panels in several pens. Some of the wire has curled or sharp edges, and other sections have developed holes in the ground underneath the wire. This is a potential source of injury and/or entrapment to the enclosed animals. The exposed sheets of ground wire must be reburied or repaired to protect the welfare of the animals.
- There are sharp points and edges in several areas of the facility. These include nail heads in wooden pallets in several pens, exposed nail heads in the sheep/goat main pen, and sharp rusted edges along the bottom of the metal barn in the goat/yak enclosure. Sharp points and edges are a potential source on injury, and must be removed or repaired. All affected areas must be repaired or replaced by 15 August 2024.

3.127(b)

Facilities, outdoor.

Several shelters in different parts of the facility were in a state of disrepair.

- The roof of the wooden shelter in the mara pen is damaged and detaching from the support walls. This is a potential source of injury to the enclosed animals, and this structure should be repaired or replaced.
- The roof of the barn in the goat/yak enclosure is in very poor condition. Multiple wooden beams are partially detached and hanging into the enclosure. A section of sheet metal is also hanging in the enclosure. This area of the roof is largely an open space and does not provide shade or shelter to any animals underneath it. This entire portion of the roof must be repaired or replaced to ensure the safety of the animals, and to provide adequate shelter from the elements.
- Part of the roof in the deer enclosure is damaged and open to the air, with a section of plywood loosely attached and hanging over the interior of the shelter. This is a potential source of injury to the deer, and also makes the shelter ineffective at protecting the animals from the elements. The roof must be repaired and maintained appropriately. All shelter repairs must be completed no later than 15 August 2024.
