A & L Pet Service  
12208 Gunther Miller Rd SW  
Fresno, OH 43824

Customer ID: **6012119**  
Certificate: **31-T-0222**  
Site: 001  
A & L PET SERVICE

Type: ROUTINE INSPECTION  
Date: 07-MAR-2024

### 2.77(b)

#### Records: Carriers and intermediate handlers.

The facility is not keeping copies of health certificates for dogs they transport. Appropriate record keeping is important for a facility to ensure that the standards of the Animal Welfare Act regulations are being met. Intermediate transporters and carriers shall keep and maintain a copy of the health certificate completed for any live dog transported. These records should then be kept for 1 year. Correct by: March 14, 2024.

### 2.78(c)

#### Health certification and identification.

The facility is receiving live dogs for transport without a health certificate. Health certificates are important when transporting dogs in order to ensure the animal is free of communicable or contagious diseases and is in good health for the rigors of transportation. An intermediate handler or carrier may not receive a dog for transportation unless it is accompanied by a health certificate issued within 10 days by a licensed veterinarian. Correct by: March 14, 2024.

### 3.15(a)(6)

#### Primary enclosures used to transport live dogs and cats.

The transport enclosures used by the facility do not have "Live Animal" and arrow labeling. Proper labeling of an enclosure is important for the safety of the animals during transportation, and especially should an emergency arise. Since the enclosures are not permanently affixed to the transport conveyance (truck/van, etc), the words "Live Animal" need to be clearly marked in letters at least 1 inch in height on the top and on at least one side of the enclosure, and with arrows indicating the correct upright position of the enclosure. Correct by: March 14, 2024.

### 3.15(c)(2)

#### Primary enclosures used to transport live dogs and cats.

The transport enclosures the facility is using do not have projecting rims. Projecting rims are important as they allow air flow between adjacent enclosures which improves ventilation and temperature regulation to the animals housed within. Since the transport enclosures are not permanently affixed to the conveyance (truck/van, etc), a projecting rim of at least 0.75 inches must be added to the exterior of each enclosure wall that has a ventilation opening. Correct by: March 14, 2024
