ARBUCKLE ADVENTURES, L L C

Type: ROUTINE INSPECTION

Date: 26-FEB-2019

3.126(c)

FACILITIES, INDOOR.

In the Giraffe Barn there was only one working fluorescent light above the feed trough. There was another fluorescent fixture mounted on the center interior roof of the barn but the bulbs were non-functional. Very little outdoor light can be seen from within the barn. The giraffe is confined to the barn when the outside temperature is too cold, which could potentially last multiple days depending on the weather. In a barn this size, the current amount of lighting is not sufficient. This lack of light could potentially affect the giraffe's mental and physical well-being. It also hampers the ability of facility personnel to properly clean the area, and to adequately evaluate the giraffe.

This affects one giraffe.

Indoor housing facilities shall have ample lighting, by natural or artificial means, or both, of good quality, distribution, and duration as appropriate for the species involved. Such lighting shall be uniformly distributed and of sufficient intensity to permit routine inspection and cleaning. Lighting of primary enclosures shall be designed to protect the animals from excessive illumination.

Correct by May 26, 2019.

This inspection and exit interview were conducted with Licensee.
