JAMES MCKENZIE

Type: ROUTINE INSPECTION
Date: 02-SEP-2014

2.40(a)(1)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

During this inspection, it was discovered the attending veterinarian died several weeks ago. Another Attending Veterinarian needs to be found and a written Program of Veterinary Care completed by the veterinarian and applicant describing in detail the veterinary care to be provided to the animals. To be corrected by 10-3-14.

2.40(b)(2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The same white with black spots pot belly pig cited last year for partially not bearing weight on her right front leg is still totally lame. She was not seen putting the leg down at all today. She was examined by the attending veterinarian on 9-11-13, who stated "no treatment, will treat if condition gets worse." Because the caretaker is used to seeing her using and not using the leg, no further exams were done. This pig needs to be re-evaluated by a veterinarian and treatment provided to alleviate her pain.

2.75(b)(1)

RECORDS: DEALERS AND EXHIBITORS.

Records of animal births, deaths, acquisitions and sales have not been kept since the last USDA inspection. Goats have been sold to individuals and recently 8 rabbits were obtained. The names and addresses of individuals who bought animals is required and if animals are acquired, the seller must provide their name, address, drivers license and license plate number. All births and deaths are to be recorded. As much as possible these items need to be recorded in the record book for the farm, and future required records must be kept. To be corrected by 10-3-14.

3.50(a)

FACILITIES, GENERAL.

The group housing cage the rabbits are in has two holes where the bird feeder was covering. These holes are large enough for the rabbits to escape out of the cage. The holes also have sharp wire edges. These holes need to be

Inspection Report

covered to prevent injury or escape. To be corrected by 9-12-14.

3.52(a)

FACILITIES, OUTDOOR.

Although the rabbits have some shelter from the sun provided by the roof and nearby trees, there are no additional measures being taken to help cool them when temperatures are above 90 degrees Fahrenheit, which occurred last week. Whenever temperatures exceed 90 degrees, artificial cooling shall be provided by some method to all rabbits.

To be corrected by 9-3-14.

3.52(b)

FACILITIES, OUTDOOR.

A couple of weeks ago, 7 rabbits were obtained. They have been placed in the former parrot cage. Although there is a plexiglass roof on top of this solid metal cage, there are no other shelters to protect the rabbits from driving rain storms. Adequate shelters need to be provided. To be corrected by 9-12-14.

3.125(a)

FACILITIES, GENERAL.

Several structural items are in need of repair. These include: in the goat barn a piece of wire fencing with unfinished edges and protruding nail points along one wall; in the goat enclosure, a patch of fencing in the corner with unfinished edges and protruding wire; in the pig enclosure, protruding nail heads on some boards and a piece of fencing with protruding wires halfway up the fence; in the llama shelter, loose barb wire strands and loose double divider fencing.

All loose and protruding wires and protruding nail heads or points need to be removed and repaired to prevent potential injury to the animals. To be corrected by 10-3-14.

3.129(a)

FEEDING.

Bread is fed on a regular basis to several of the animals, along with other feed. The 9 pigs were observed eating some of this bread. Most of it was moldy. Most of the bread stored in the horse trailer was moldy. Moldy feed can cause digestive upsets and should not be fed to the animals. All provided food needs to be wholesome, palatable, free from contamination, and of sufficient nutritive value to maintain all animals in good health. To be corrected immediately.
