

Inspection Report

Jack Parson
Melisa Parson
54 East Castor River Rd
Fredericktown, MO 63645

Customer ID: **18810**
Certificate: **43-A-5428**
Site: 001
JACK & MELISA PARSON

Type: ROUTINE INSPECTION
Date: 17-SEP-2014

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

*** An adult male Yorkshire Terrier, microchip number 4A72745754, was observed with extensive blackish material on the two upper canines. These accumulations were to the extent of obscuring the outline of the tooth shape and covered the majority of the tooth surface. Inadequate dental maintenance may lead to early tooth decay and loss as well as potential gum disease and infections. These conditions may be painful and distressing to the affected animal. This dog must be presented to a licensed veterinarian for evaluation and dental maintenance. The kennel must adapt a program through which all dogs are routinely monitored for dental concerns and addressed in a timely manner. To be corrected by: 09/25/14

3.11(b)(2)

CLEANING, SANITIZATION, HOUSEKEEPING, AND PEST CONTROL.

*** The wire cage panels within the interior portion of the kennel have a heavy coating of dust as well as areas of cobwebs between the wire strands. The wall panels of the interior enclosures have accumulations of dust and debris along the support structures as well as staining and spotting. The owner stated it had been several weeks since a thorough cleaning had been conducted within the kennel building. This area should be thoroughly cleaned to remove all organic materials and sanitized. Kennels must be thoroughly cleaned at least once every two weeks to reduce potential of pests, disease and odor hazards within the kennel. To be corrected by: 09/25/14

This inspection and exit briefing was conducted with an owner on 09/17/14 with delivery of report to be conducted on 09/18/14.
