Type: ROUTINE INSPECTION  
Date: 30-JUN-2022

---

### 3.125(a)

#### Facilities, general.

The outdoor shelter for 3 domestic cattle is a metal sided building. The metal siding has become damaged in two spots leaving large sharp edges at the height of the cattle. The sharp edges may cause injury to the animals housed in that enclosure and affect their health and well-being.

The outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury. The metal siding must be repaired so sharp edges are not present.

To be corrected by: 15-July-2022.

### 3.127(c)

#### Facilities, outdoor.

The outdoor enclosure that contains 3 domestic cattle has a large accumulation of mud around the grain feeding receptacle. The cattle are fed hay in the middle of the enclosure where there is dry dirt but they must walk through mud to get to the grain.

Poor drainage with areas of mud leads to animals being forced to walk and stand in wet conditions while eating and may cause health problems. Cattle are more likely to have foot problems is kept in a wet environment for an extended period of time. The outdoor enclosure must have adequate drainage so water may be rapidly eliminated and provide the cattle

## Inspection Report

---

have a dry place to eat.

To be corrected by: 30-July-2022.

### 3.130

#### Watering.

The water receptacle for 2 mini yaks had an excessive buildup of algae and organic material coating the entire interior surface of the receptacle. This is the only water source for the two mini yaks. The facility representative states that it was most likely cleaned last weekend. Buildup of algae and organic material in water does not provide the animals potable water and may lead to health problems.

Potable water must be provided as often as necessary for the health and comfort of the animals. All water receptacles shall be kept clean and sanitary. The facility must provide potable water and ensure the water receptacle is kept clean and sanitary.

To be corrected by: 4-July-2022.

This inspection and exit interview were conducted with a facility representative.
