Type: ROUTINE INSPECTION
Date: 10-DEC-2024

2.75(b)(1)

Records: Dealers and exhibitors.

The facility's inventory records did not include disposition information for a budgie that died on October 13, 2024. Acquisition and disposition records are necessary to accurately track and identify animals used for regulated purposes, and to help assess the animal care program. The licensee must ensure all required records are kept and maintained for all animals acquired, transported, sold, euthanized, or otherwise disposed. The records shall include any offspring born or hatched while in the facility's possession.

Acquisition records shall include:

- the date the animal was acquired
- the species of the animal
- the name and address of the person from whom the animal was acquired
- the USDA license or registration number of the person from whom the animal was acquired if those individuals are licensed under the Act, OR the vehicle license number and state and the driver's license number and state of the person if they are not licensed under the Act
- the number of animals in the shipment.

Disposition records shall include:

- the date the animal was sold or died
- the species of the animal
- If sold or given: the name and address of the person to whom the animal was sold or given
- If sold or given: the USDA license or registration number of the person to whom the animal was sold or given if they are licensed under the Act, OR the vehicle license number and state and the driver's license number and state of the person if they are not licensed under the Act
- the number of animals in the shipment.

The facility must maintain a record of acquisitions and dispositions for all regulated animals and ensure all required information is properly and accurately documented at all times.

Inspection Report

3.125(a)

Facilities, general.

The capybara enclosure is not maintained in good repair to protect the animal from injury. A heat lamp's unprotected electrical cord in the capybara's enclosure is hanging approximately two feet above the floor. The heat lamp is for a tortoise also housed in the enclosure and is powered. While the light itself is protected from the capybara, the light's electrical cord is hanging within reach of the capybara, risking chewing or pulling

Electrical cords pose a significant health risk to animals that may bite or pull on them. Unprotected electrical cords that are within an animal's enclosure allows access to an electrical hazard that can cause electrocution, injury and/or death. Housing facilities shall be maintained in good repair to protect animals from injury including limiting access to electrical cords.

Corrected at time of inspection. Correct by December 17, 2024

3.154(c)(4)

Environment enhancement to promote psychological well-being.

The facility has not developed, documented, and followed a species-specific plan for the environmental enhancement of individually housed birds that are unable to see and hear other birds. A budgie has been individually housed in a cage in the office for observation since November 20, 2024. This budgie is not able to see or hear other birds. Budgies are a social species of birds and require special consideration when housed without being able to see and hear birds of their own or compatible species. The facility's written environmental enhancement plan (EEP) does not have information in their written EEP for this special consideration, nor was one implemented for this bird. Without such environmental enhancement, this bird may develop abnormal behaviors and could experience psychological distress.

The facility must develop, document, and implement an adequate enrichment plan per the attending veterinarian's instructions for all their birds, including special attention regarding enhancement of the environment of those individually housed social species of birds that are unable to see and hear birds of their own or compatible species.

Correct by: December 24, 2024.

This inspection and exit interview were conducted with facility representatives.
