### 3.125(a)

#### Facilities, general.

Facilities are not being maintained in good repair to protect the animals from injury. An old tack room building adjacent to the camel barn has wooden walls that are broken and rotting, exposing sharp edges of the wood and the inside of the building (now used for storage). The wood framing on the front right side of the building has a section missing exposing nails. One of the wallaby enclosures is covered with an old tarp that is fraying and has several strings dangling down into the crate. Exposed nails, sharp wood edges, and frayed strings within an enclosure make animals at risk for injuries or illnesses. Correct by ensuring facilities are maintained in good repair to protect the animals from injury.

### 3.127(d)

#### Facilities, outdoor.

The enclosure housing two wallabies is located within inches of the facility's perimeter fence. A perimeter fence which is less than 3 feet in distance from a primary enclosure may allow for animals or unauthorized persons outside the fence to interact with the regulated animals inside the enclosure. The facility must maintain a distance of at least 3 feet between primary enclosures and the perimeter fence, or receive written approval from the Administrator for shorter distances.

This is the 1st Re-License Inspection for a Class "B" license. The inspection and exit briefing were conducted with the facility representative.
