Certificate: **74-C-0777**
Site: 001
FLICKA CORP.

Type: ROUTINE INSPECTION
Date: 26-JUN-2014

2.40(b)(2)

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Several of the mature llamas in the front pen appear to be under weight . Their spine and pelvic bones are visible. One young llama "Rusty " housed in the pen behind the house is also very thin. His spine and ribs could easily be felt under his coat. There was no hay present for any of the animals housed with Rusty .

These animals need to be examined by a veterinarian to determine cause of weight loss and to assess diet and overall health. CORRECT BY : 7-3-14

3.125(a) REPEAT

FACILITIES, GENERAL.

Much of the debris (boards and string from hay) that was present in the goat pen has been removed this date , however in the goat/llama pen behind the house a gate with chain link fencing is laying on the ground . An animal may be injured if they are trapped in the wire on the gate. The gate must be promptly removed from this area to prevent animal injury . All animal enclosures must be maintained in good repair to prevent injury to the animals.

3.127(b)

FACILITIES, OUTDOOR.

The 7 potbelly piglets are housed in a pen in front of the office. There is an umbrella for shade but there is no other shelter available to these animals. There is no protection from rain or wind and thunderstorms are predicted for the day. These piglets must be provided with shelter that protects them from the rain and wind. CORRECT :
Immediately

The facility inspection was conducted with an employee. Owner was contacted by phone for the exit briefing .
